

FeatureMage by AgentHouse

Sathvik | Thushar | Anil | Harsha

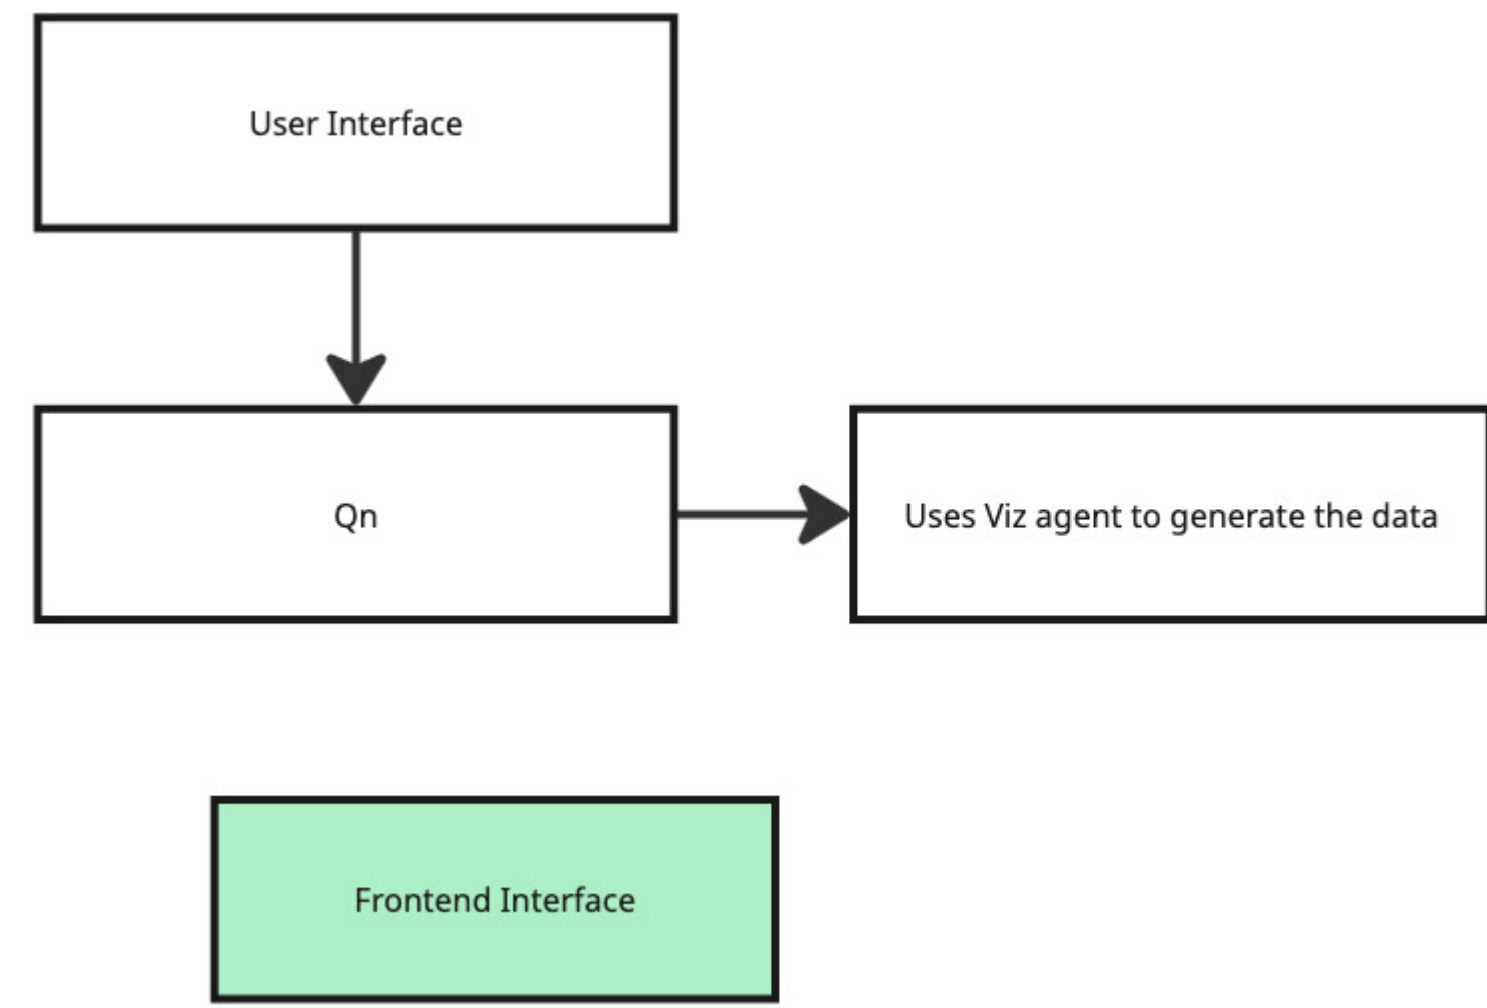

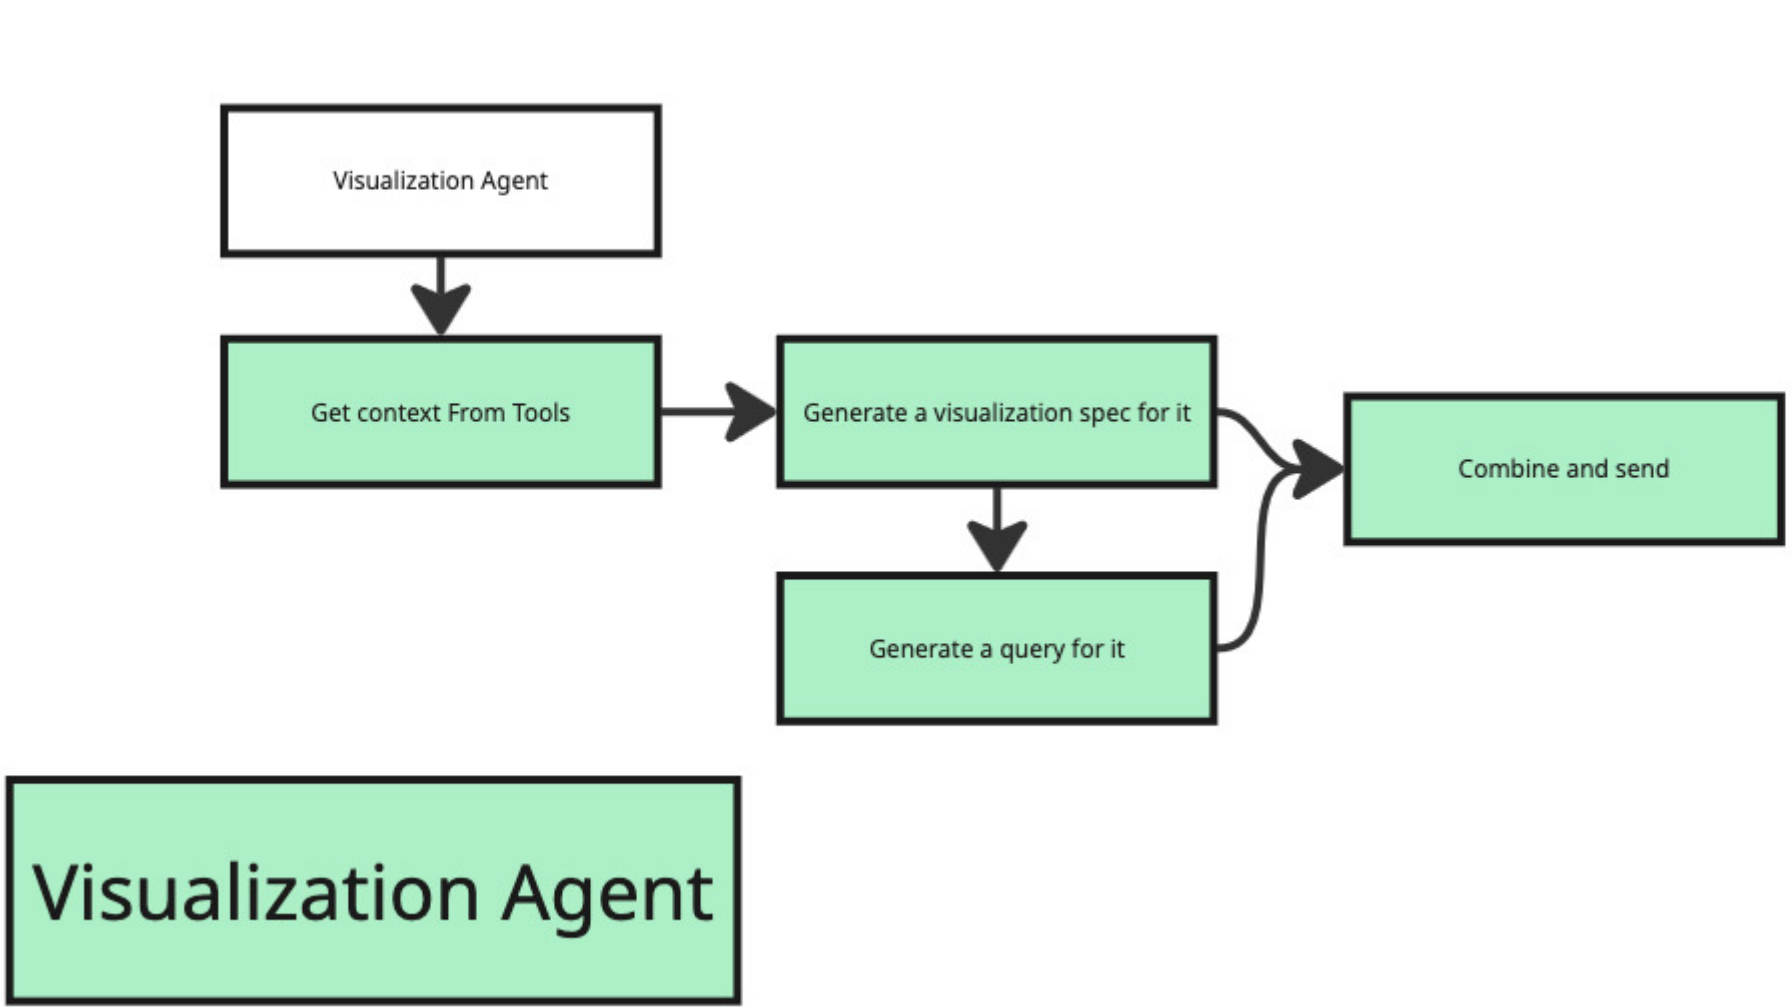

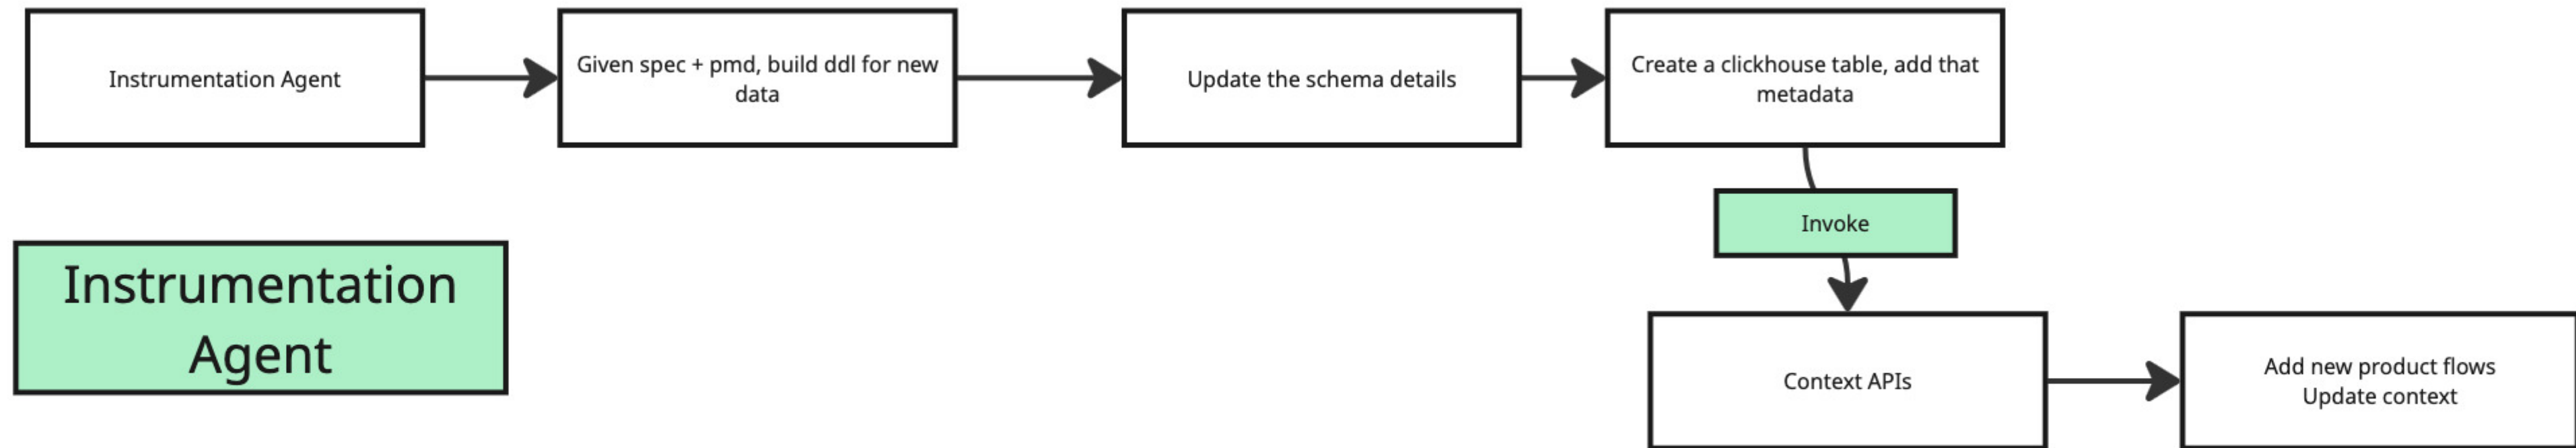

From feature spec to insight: agents that instrument, analyze, and explain."

Problem

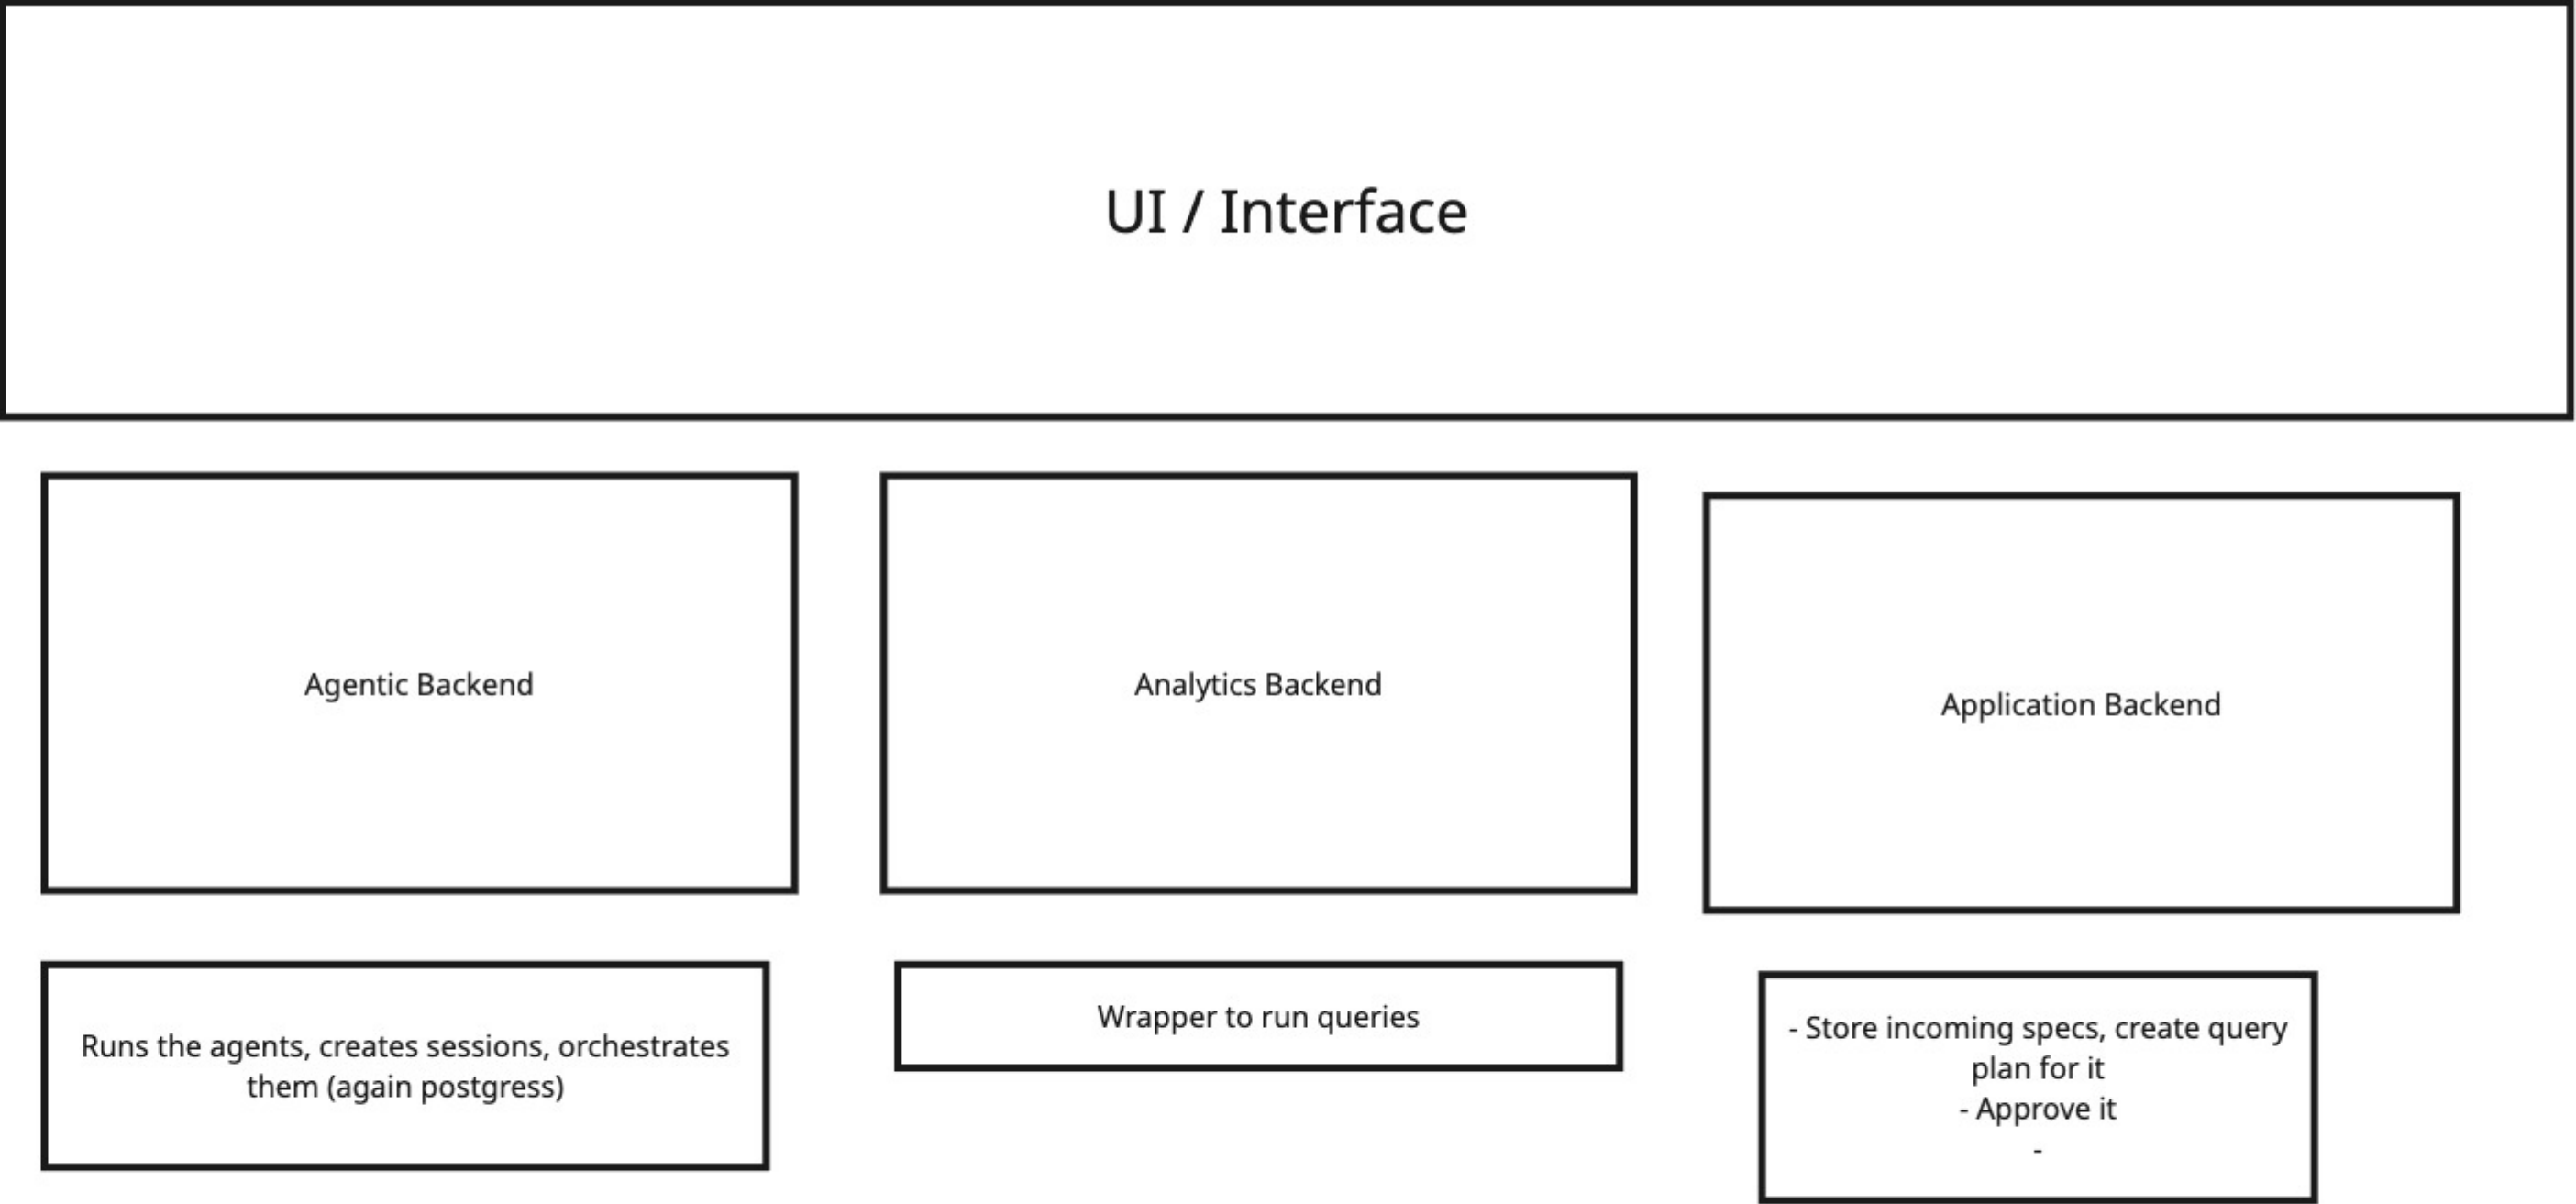

- 1 Manual instrumentation and schema design take a long time
- 2 Context between features, engineering and analytics is lost
- 3 Long delays in development leads to missed opportunities for customers
- 4

Solution

- 1 A runtime instrumentation + analytics agent with context layer can deliver insights in minutes which takes weeks manually

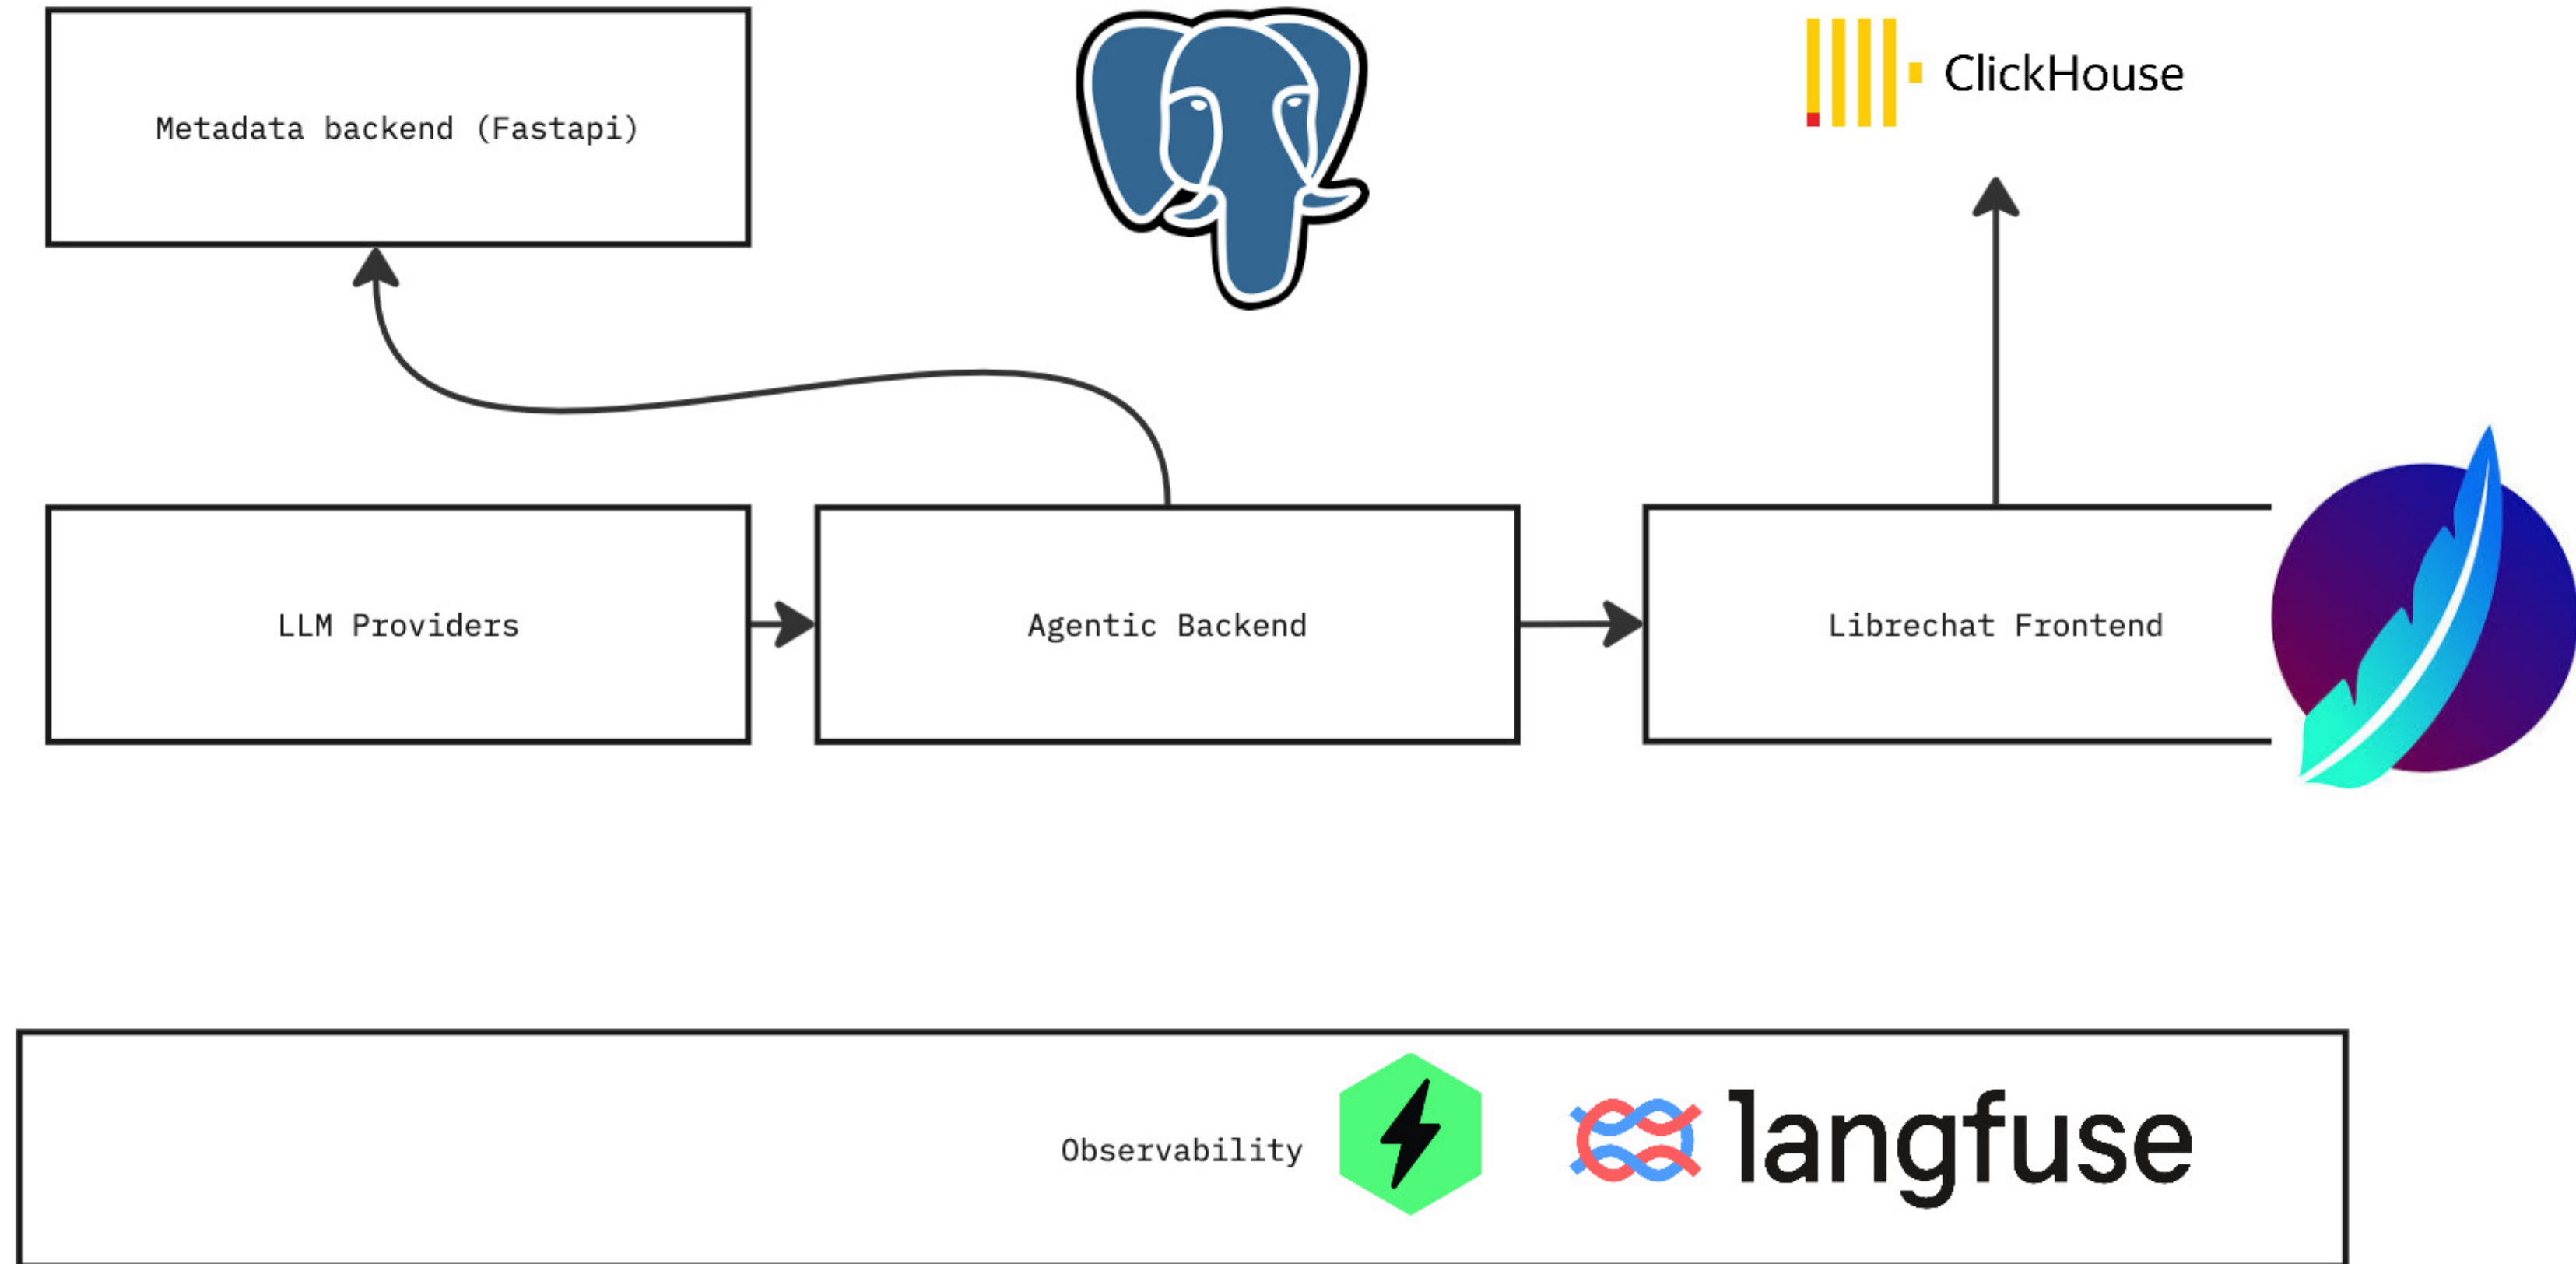

Architecture Diagram

Clickhouse

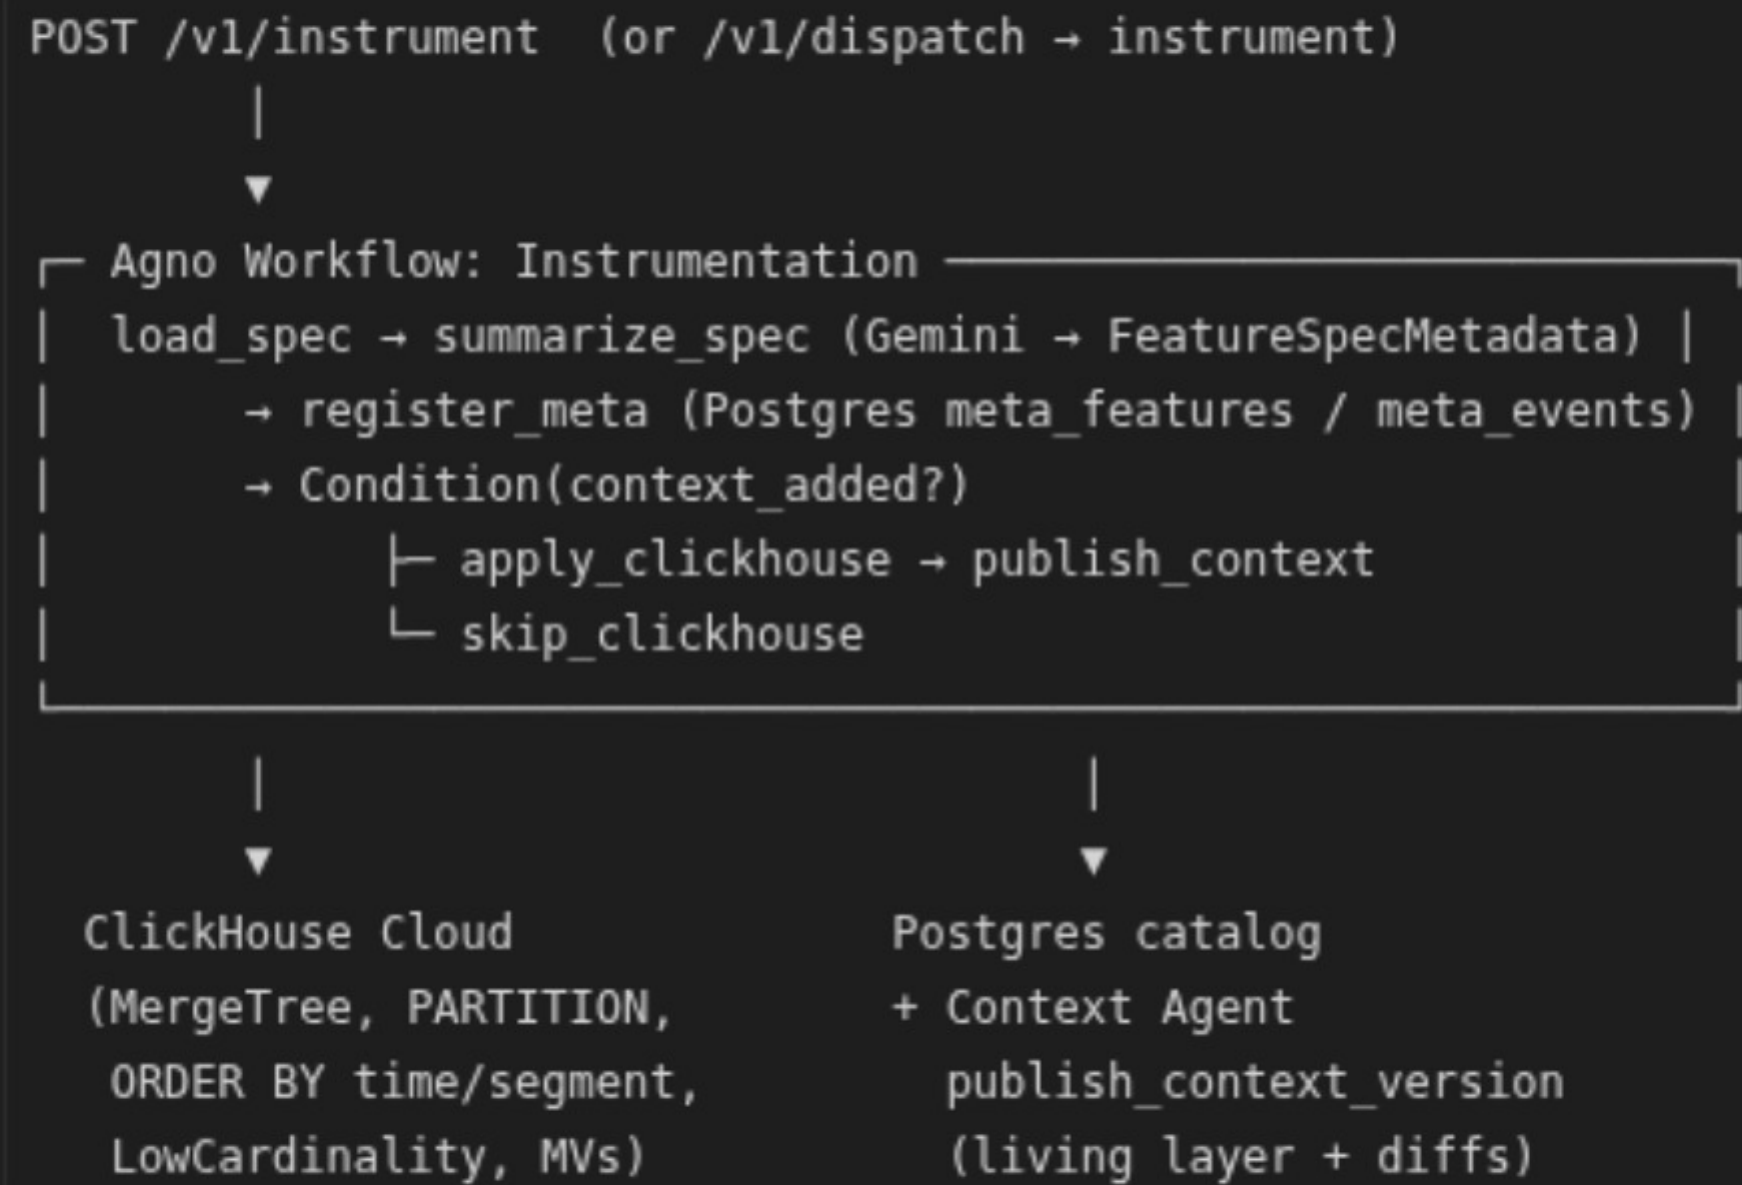

- We used MVs to create activity schema table, since we observed most queries are product analytics queries
- We took adv of clickhouse funnelWindow Functions to generate simple funnel queries

Architecture

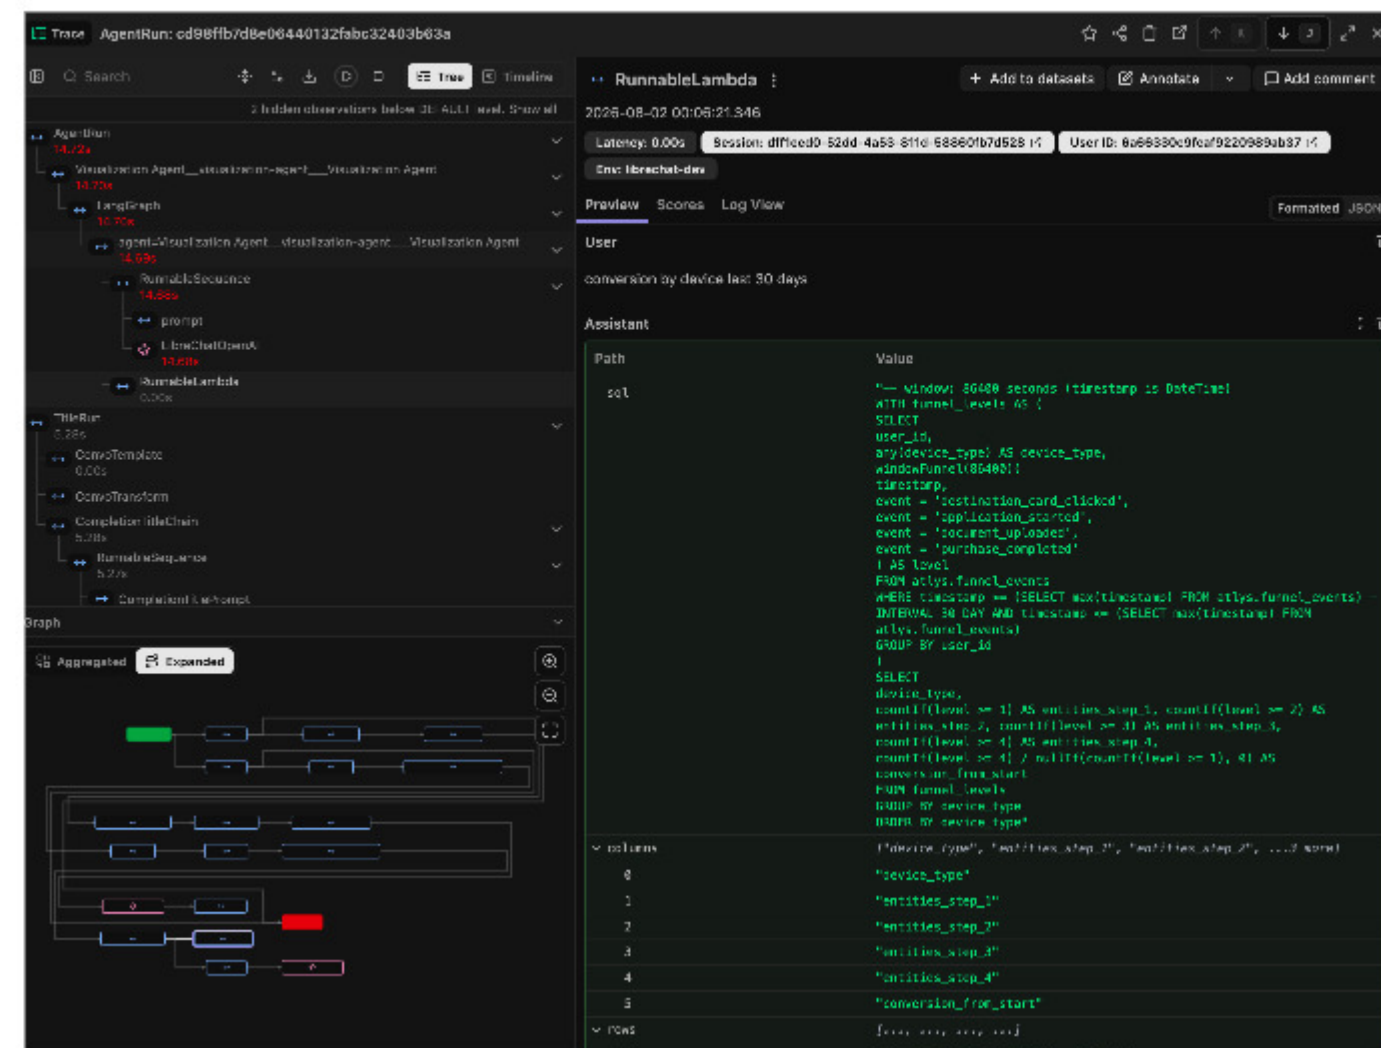

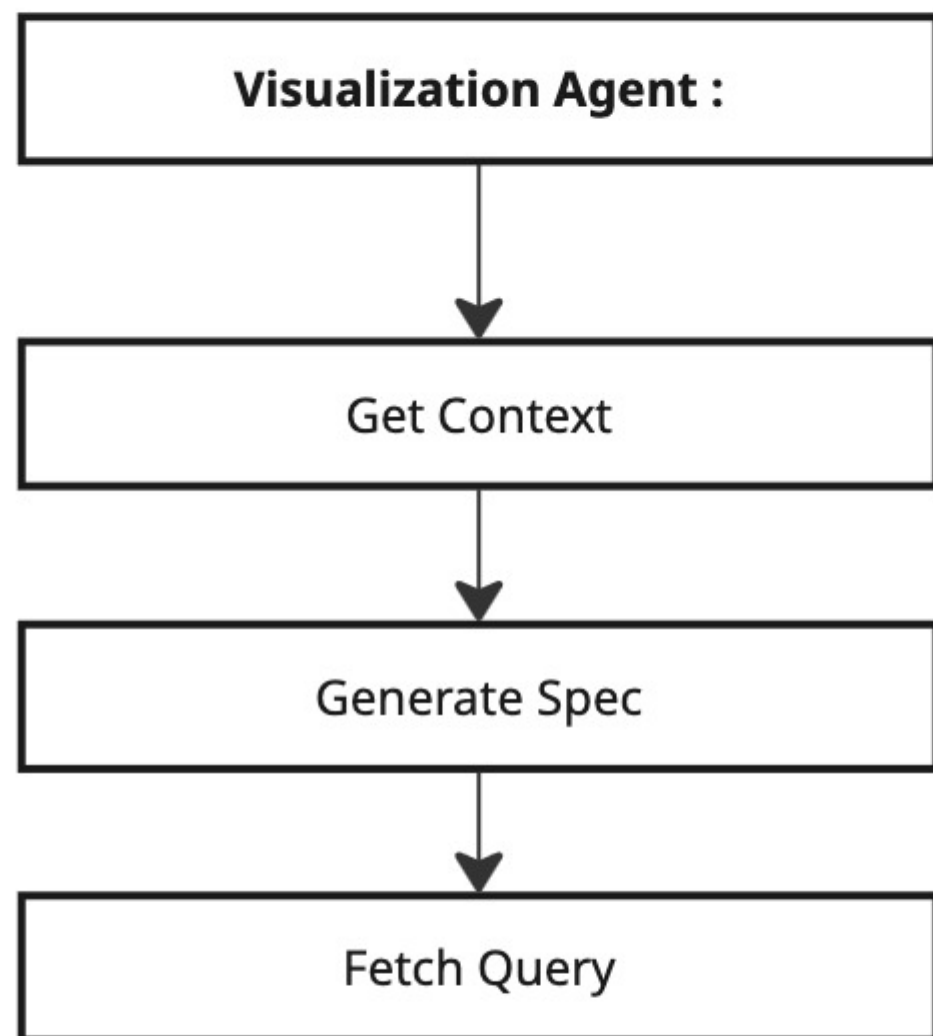

Instrumentation Agent

Spec + NDJSON → ClickHouse DDL/MVs + Postgres meta + context version — Agno workflow, Langfuse-traced.

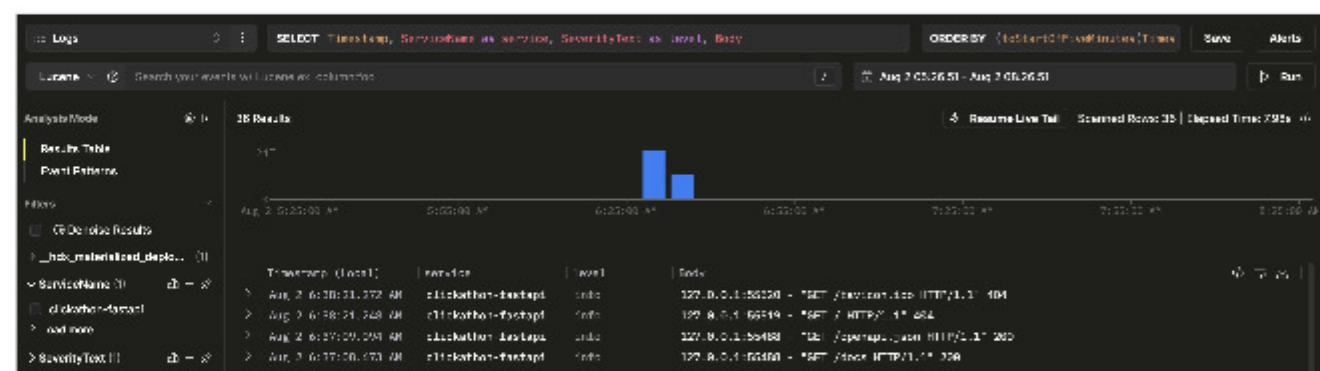

Layer	Tech
Orchestration	Agno Workflow + Condition ; Gemini structured output_schema
Schema design	Event-evidence DDL; SQLGlot-validated CH SQL; no (id,...) sort keys
Persistence	CH apply toolkit + PG registry (meta_*)

Analytics Agent

Langfuse for tracing errors

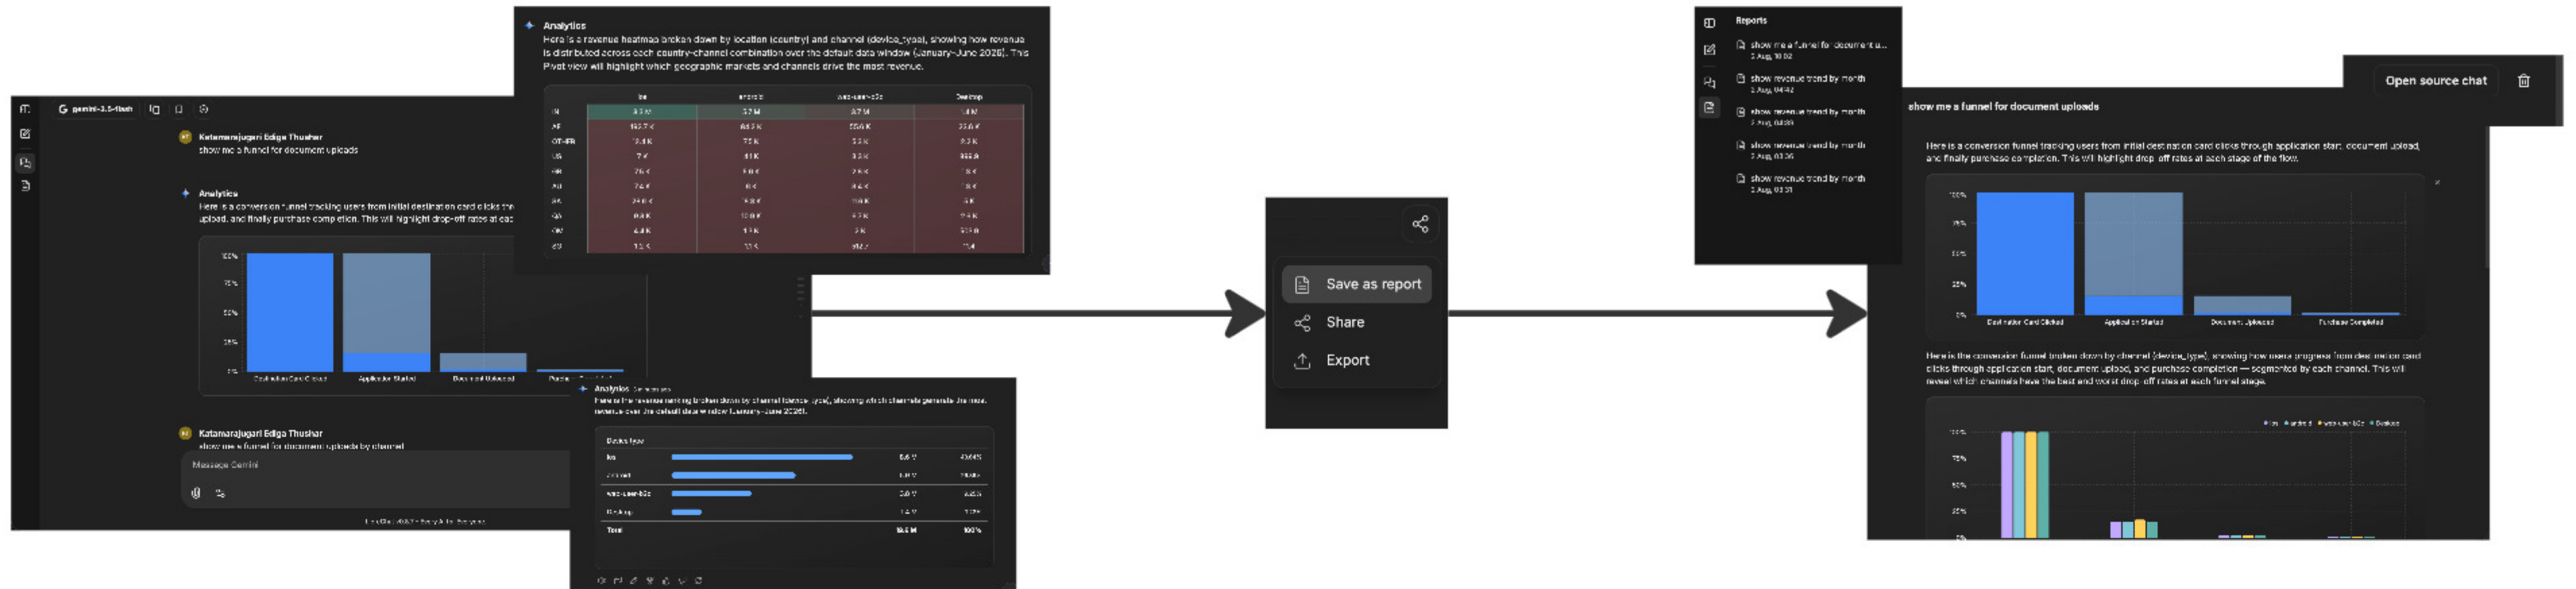

Langfuse for tracing errors

Challenges + What Next

Making viz agent better

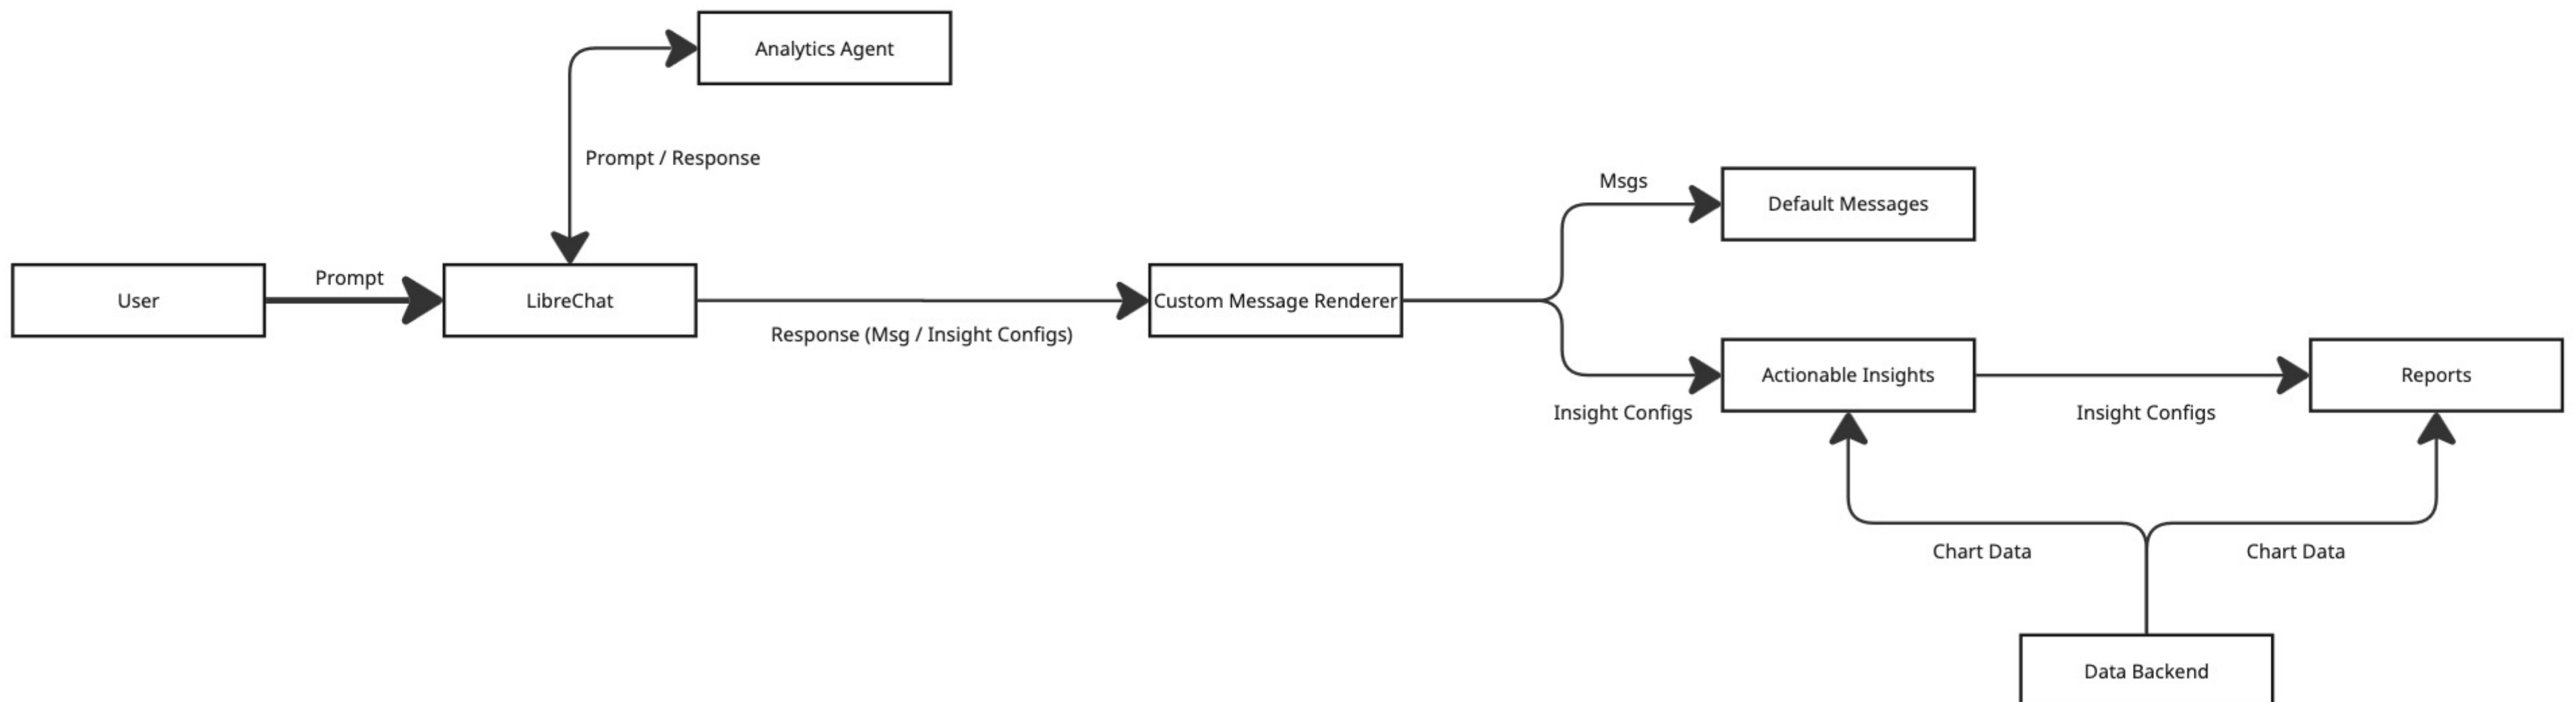

Making agents independent, handoff,
teams

Frontend

Conversational Analytics

Reports

Context Agent

Get Context

Audit (spot stale, missing, or contradictory definitions)

Explain — answer in product/analytics language, citing context_version
